

CarboSchools is a cooperation project between

## Background

CarboSchools stands for "Global Change and Research for secondary schools"

CarboSchools is an initiative of scientists involved in two major European research projects about the carbon cycle: **CARBOEUROPE** and **CARBOOCEAN**. They invite secondary schools to join forces to enhance student's understanding of global change and to act locally to reduce emissions of greenhouse gases.

Teachers and scientists from all over Europe participate in this initiative with the purpose of motivating students with real life challenges.
